

MAKING WOOD WORK

HAVE YOU EVER COME ACROSS FINNFOREST, EUROPE'S LEADING ENGINEERED WOOD PRODUCTS COMPANY?

Our innovative materials are used in spectacular constructions like the glulam beams defining the Sheffield Winter Gardens. They also appear in homes and gardens all over the UK with decking, mouldings, cabins, flooring and loads of other products sold through retailers.

Elsewhere our specialist Finnish birch or spruce plywood is used to provide strong and durable solutions for commercial vehicle floors and linings, furniture production, timber frame housing or concrete formwork so the chances are even if you've never heard of us, you've had the benefit of using our products, one way or another.

For more information about Finnforest and the world's only truly renewable building material, visit www.finnforest.co.uk
